

Everything you can imagine – we got it

Producteers is delighted to announce yet another innovative wet-dry vacuum cleaner to its range. The range will be in step 1 launched up to Dust Class L and will as a 2nd step be launched in Dust M and H. The range consist of tanks from 20l/5gal up to 50l/13gal.

The new range is modular and can be equipped with all thinkable features like cord reel (not only 2 pole but also 3 pole), socket with automatic start/stop with and without optional power split, power control with LED, controllable blow function, bag full indication, drain function, etc, etc.

The machine can be configured without filter cleaning, with semi-automatic and fully automatic filter cleaning. The new patented fully automatic filter cleaning system works with only ONE filter and a mechanical durable/reliable float to cut off for the water when machine is used for sucking up water. No electrodes as other manufactures are therefore needed to cut off for the water. Furthermore the auto filter cleaning system requires no electronics and is therefore both cost effective as it is reliable. On the chart to the right it can be seen that after sucking up over 160 kg of fine cement dust the air flow remains the same as before the test.

Yours sincerely

Producteers Management Team
