

Producteers reinvents the ash cleaner

Producteers is proud to announce yet another innovative product (COMFORT) that we are confident will live up to and exceed our customers' expectations.

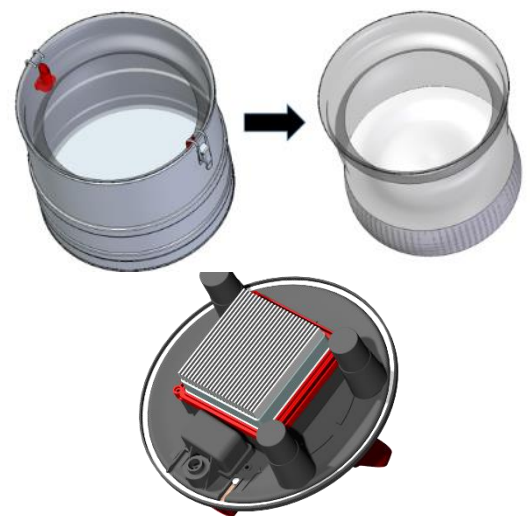

Ash Cleaners are necessary products for cleaning of cold ash and fine dust from fireplaces, stoves, pellet burners, BBQ, etc. However, today customers complain heavily about 3 things in relation to ash cleaners available on the market namely:

- Continuously clogged filter that needs to be clean
- Troublesome disposal of dust/debris
- Loud/unpleasant noise.

With the new COMFORT range of Ash Cleaners Producteers addresses exactly these issues. COMFORT introduces a new back flow filter cleaning system, where the customer by the push of a button can easily clean the filter and restore suction performance. Thus, no need any more to take out the filter and clean it every time after use.

COMFORT has the inlet in the top thereby enabling the customer to insert a standard plastic bag and use it for disposal bag. Special parts inside the tank make the necessary holes in the bag so the bag is not sucked into the filter. COMFORT uses a flat filter which will enable the customer to fill the tank to an unprecedented level.

A special motor and structural design of the COMFORT minimize the noise from the unit.

Yours sincerely

Producteers Management Team
